Performance and sustainability: RadiciGroup at Klimahouse 2025

The Group presents its range of nonwoven fabrics designed for high-quality modern construction and sustainable building

For the first time, RadiciGroup is taking part in **Klimahouse**, the international trade fair dedicated to **energy efficiency and sustainable building**. It will be held in Bolzano **from 29 January to 1 February 2025 (Hall CD, Stand D22/04)**. The event is an important opportunity for the Group to present its high-performance, sustainable **nonwoven solutions** for the **roofing** sector.

RadiciGroup has been operating in nonwoven fabric production for over 30 years and offers semi-finished products that contribute to the quality and efficiency of modern construction, ensuring **heat insulation, waterproofing and durability**. The Group is taking part in Klimahouse with its **Nonwovens Business Line**, showcasing three different nonwoven ranges: spunbonds from the **Dylar®** family and meltblowns from the **Radimelt®** family, as well as the spunbonds made using recycled polypropylene that belong to the **Responsible®** family. These solutions are available in **different configurations** and a wide **range of colours** to meet every customer requirement.

“By taking part in Klimahouse, we have the chance to present our specific range of nonwoven fabrics developed for the roofing sector, at a major event for customers and prospects in the industry. Our 30-year experience combined with our technical know-how allows us to step forward as an outstanding partner in improving the quality and reliability of membranes for the coverings of buildings. Thanks to our in-house R&D structure, equipped with state-of-the-art tools, we develop innovative solutions with a low environmental impact that can help make a difference in the world of construction, also thanks to our ability to create tailored, highly customised solutions,” states **Stefano Frione, Head of RadiciGroup’s Nonwovens Business**.

RadiciGroup nonwoven fabrics are perfect for applications such as **breathable membranes, vapour barrier membranes, heat insulation, adhesive backing, flexible sealing, bituminous membranes, and roof and façade insulation**.

Dylar® is the flagship brand for the roofing sector: a wide range of **high-performance** spunbond nonwoven fabrics **with high mechanical strength and tear resistance** and, where required, excellent for **printing and bonding** processes.

Radimelt® is another strategic brand for the Group, with its range of **highly breathable meltblown products**.

RadiciGroup has made **sustainability** a fundamental pillar of its strategy, offering innovative solutions that respect the environment. This is why the Group has expanded its range of spunbond nonwoven fabrics with **Responsible®**, containing up to 100% recycled polypropylene and certified by **SCS Global Services**. This sustainable solution allows for a reduction of more than 50% in CO₂ emissions, measured according to the **LCA (Life Cycle Assessment)** methodology.

RadiciGroup has also joined the **ISCC PLUS (International Sustainability and Carbon Certification)** scheme, which documents traceability throughout the supply chain and verifies that certified companies adhere to high environmental and social standards.
